

52.9mm FOCUSING ZOOM

PROFILE

Falitec International is a specialized manufacturer of high performance Electro Optic EO systems and solutions renowned globally for reliability, which capitalizes on mechanical, electro-optical and thermal engineering.

Specialist engineering teams with experience in various disciplines of engineering (mechanical, electronic, optical, and software), strive on providing innovative, effective and efficient solutions to the defence and security sectors.

MARKETS

The need for high security and safety is on the rise. Falitec's leading expertise, Day and night vision systems, provide the solution for clients in many sensitive sectors.

The EO / IR systems manufactured by Falitec International are proven for a variety of Homeland Security missions, including protection of Airports, Seaports, Military sites, Harbors, Coastlines, Borders, Critical Asset Installations and more. Falitec's wide product line includes comprehensive short-medium-long range day/night scanning, observation and surveillance solutions for varied Homeland Security missions.

BORDER PROTECTION:

Border surveillance and protection requires continuous day and night vision large area scanning systems capable of detecting, tracking and recognizing unauthorized intruders.

CITY SURVEILLANCE:

Citywide surveillance that support law enforcement's objectives

SENSITIVE SITES/CRITICAL INFRASTRUCTURE:

Long-range surveillance systems ideal for safeguarding critical infrastructure with the ability to monitor perimeters of these premises with reliable and high performance solutions.

NAVAL/MARITIME:

Gyro-stabilised cameras combined with radars guarding maritime assets and coastal areas that can support to detect sea threats and piracy.

PERIMETER PROTECTION:

Intrusion detection systems protecting civil traffic areas such as airports and shipping ports

TECHNOLOGIES

Falitec International designs and markets best in class vision systems that are the highest quality and apply latest technologies.

Precision optronic solutions from UV to LWIR: night and all weather vision technology that delivers a broad spectrum of thermal imaging and near-IR security products, which are time-tested and field-proven.

Latest optical technology and infrared thermal imaging solutions provide every piece of the puzzle for detection, recognition, and identification tasks - day or night.
